Mechanical
Electrical and Structural Construction
Administration
Cost Estimating

Sectional Elevation

PROJECT DESCRIPTION

The project involves approximately 2,850 square feet of complete building renovation.

The project responsibilities were to remain within the existing building footprint and reuse the basement as a new living space for elderly parents.

The project required vertical and horizontal linkages for an improved circulation pattern for the current family and the new members. The environmental sensitive of linking the exterior natural light and outdoor space was essential to the design. We will remain the professionals until the project is completed.
